Architectural Description

Replicating the early Shinto shrine of Izumo Taisha in Shimane Prefecture, Japan, this finely detailed shrine was constructed by Takata, a master builder brought from Japan expressly for this project. Takata used wooden pegs instead of nails in all the joinery. When the building was moved to this site from Leleo Lane in 1966, it was modified to conform to modern building codes, following plans by Robert Katsuyoshi. However, it retains many traditional elements, including the dramatic roofline with chigi (crossed roof finials) and katsuogi (ridge ornaments), and its karahafu (double curved gable)-roofed kohai (portico) with lion-head carved beam ends. The traditional elements of a Shinto shrine include a torii (gateway) accessing the spiritual realm, a wash area to the right for purification, and the entrance bell.

Description

The Agmata Building is two stories tall with a rounded corner on the corner of Liliha Street and North Vineyard Boulevard. The building sits on a concrete slab, has a concrete frame, and a flat roof. Five commercial storefronts are located on the ground floor, and apartments with jalousie windows are located on the second floor. Key features of the building include rusticated CMU blocks, mosaic panels located below the second floor windows, and the Agmata Building sign.

Architectural Description

This one and a half story ecclesiastical building has a shallow pitched, front facing gable roof. It is distinguished by its articulated, structural concrete frame and its concrete, butterfly front wall with a stained glass window running down its spine. To either side of the centered butterfly wall are recessed entry lanai, with the doors to the sanctuary located on their interior side walls. The rear walls of the lanai and the church's side walls are of CMU block. A single story, concrete office and classroom wing runs off the church on its *makai* (ocean) side. It has a flat roof and awning windows.

Description

Mayor Wright Homes consists of 2 auxiliary buildings and 35 apartment buildings located within a single block. Open lawns and parking lots separate the two to three story walkup buildings. Buildings sit on slab foundations, have concrete block walls, and flat built up roofs with solar hot water heaters. Apartments on the second and third floors are accessed via a central staircase and walkways on one side of each building. Each apartment has a laundry room partially enclosed with decorative CMU. Several changes have been made to buildings, including moving staircases from the front to the rear of the buildings, infill lanai with Concrete block, and changing windows from steel sash and hopper windows to jalousie and awning windows respectively.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

The Fujii Store is a two story, double walled, commercial building with residential units on the second floor. It still retains its original tongue and groove walls, although in certain places the vertical boards have been reinforced with plywood. There are two store fronts on the ground level with most of the original display windows boarded up. The second story has fourteen jalousie windows facing King Street, and a corrugated metal awning runs across the façade between the two stories. Four, rectangular, wood slat ventilators are in the attic story. A corrugated metal shed roof covers the building. Behind the building are two, two-story duplexes which have tongue and groove walls, composition shingle hipped roofs, and concrete slab foundations. Wood steps run up the front of the duplex immediately behind the Fujii Building to access the wood lanai/walkway which runs across the rear of the commercial building to access the residential units.

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

This commercial building has a pentagonal floor plan and is characterized by a wide, fluted, concrete cornice, which projects out from the building's scored CMU block walls. It has a precast concrete structural frame which is in-filled by the scored blocks. A roll-up door is to the right side of the façade and serves as an entry to the commercial space. A bank of vertical jalousie transoms runs across the top of the front wall.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

This single story commercial building is characterized by a flat roof with an overhanging front eave. It is four bays wide, with each bay containing a store front. Concrete columns demarcate each bay, and each bay has an aluminum framed store front containing a display window and a single paned door. Above the window and door is a band of vertical jalousie transoms. In two places this transom line has been compromised. The kick plate is of brick sized concrete blocks.

Architectural Description

Built for James Kealoha, this eight story apartment building has a rectangular footprint with a *mauka-makai* (mountain to ocean) orientation. Running parallel to Pua Lane, the building is set back from the road by an uncovered, paved parking lot, and is characterized by inset, lanai with metal railings running the length of its façade. A projecting tower, made of scored CMU block, houses the elevator. Two sets of concrete, dog leg steps are set within the body of the building along the lanai. Windows are jalousie, and a pair of aluminum sliding doors access the lanai. The walls are of scored CMU block and a wide concrete band demarcates the first story from the remainder of the building.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

This is a three story, walk-up apartments with five units on each floor. It sits on a concrete slab foundation, and has a flat roof with wide concrete eaves overhanging the front and rear facades. It has 8" half CMU block front and rear walls with end walls made of decorative concrete blocks laid in a pattern to form concentric squares. Lanai/walkways run across the façade on the second and third floors with outset, straight run, concrete steps at either end of the façade accessing the lanai/walkway. The steps are parallel to the façade. The lanai/walkway metal railings feature two wide bands, while the step railings have simple, thin metal balusters. Each unit has a front door with a pair of jalousie windows to either side. Also each unit has a private lanai in the rear which is set under the roof's overhang. A paved, uncovered parking lot is in front of the building and separated from the sidewalk and street by a low mock orange hedge.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

This rather straight-forward, CMU apartment building is comprised of two parallel structures, one almost three times the length of the other. Two flat roofed breezeways connect the two parallel structures to form an L-shaped building. Rising three stories in height, lanai/walkway with metal railings service all the units, running down the sides of the two buildings which face each other. Five sets of enclosed concrete steps access the upper stories.

Architectural Description

This four story, condominium contains nineteen two-bedroom units and one one-bedroom unit. It sits on a concrete slab foundation and has a flat roof with a wide parapet. The building is constructed of CMU block and features split-faced block below its jalousie windows. It follows an irregular floor plan with receding and advancing bays fronting on Kanoa Street, with four jalousie windows in each bay. Parking is at the rear (*mauka* or mountain side) of the building, where an E-shaped façade allows lanai/walkway with metal railings to access the five units on each floor.

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

This four story, L-shaped condominium has scored CMU block walls, and a flat roof with overhanging eaves with a wide fascia. Its 28 units include 25 two-bedroom and 3 studio apartments. The courtyard formed by the two wings of the L is devoted to paved, uncovered parking. The sides facing the parking lot are characterized by lanai/walkway with metal railings. Doors to the apartments, as well as jalousie windows front on the lanai/walkway. Projecting stairwells with scored CMU block walls and a flat roof provide access to the upper stories and are located at end of each wing. The wing's end walls have two floor-to-ceiling jalousie windows, and the *makai* (ocean facing) wall facing Kanoa Street is four bays wide, with each upper story bay having a pair of floor-to-ceiling jalousie windows and a recessed lanai with a balustrade featuring single cell CMU blocks laid in soldier courses to emulate breezy blocks. Aluminum sliding doors access the lanai. On the ground level the first 1.5 Ewa (western) most bays along Kanoa Street are open to accommodate additional parking.

Architectural Description

Six buildings comprise this housing complex, housing 117 two bedroom units. Five buildings run perpendicular to Vineyard Boulevard, while the sixth building extends across the breadth of the property at its rear (*Makai* or ocean) side. The buildings are three stories high and have flat roofs which are overhanging to protect the cantilevered lanai/walkways which run down the front of each building. Made of CMU block, the end walls are built of decorative block which result in a recessed diamond shaped pattern concrete, dogleg steps are located at the ends of the buildings and have a CMU screen wall with decorative openings. The buildings' roofs extend outward to shelter the steps. Each unit has a door with an aluminum framed picture window flanked by jalousie windows to one side and a pair of aluminum framed sliding windows on the other side. Uncovered, paved parking is accommodated in the areas between the buildings.

Architectural Description

This single story, single wall bungalow sits on a post and pier foundation. It has a composition shingled hipped roof with overhanging eaves with exposed rafter tails. It has an inset, left of center entry porch which has a front facing, bracketed, curved gable roof. The porch is approached by three concrete steps with lave rock shoulders. Paneled, square columns, at the outer corners of the porch, support the gable roof, and small modillion-like brackets are under the gable. A paneled balustrade encloses the porch. The walls are of tongue and groove and a 6" girt is below the sill line of the windows. To the right of the porch is a pair of 1 x 1 double hung sash windows. The front door remains intact with its fifteen pane door and its ten pane side lights. A laundry shed with a five panel door and latticed openings extends out from the right side of the house and a shallow, front facing, gable roof covers the shed and its adjoining car port. A pipe column supports the outer corner of the car port.

Architectural Description

A well-composed modern church with Gothic overtones, St. Elizabeth's conveys a dynamic verticality through its two-story entrance, shallow pilaster-like buttresses, and side bell tower. Its Christian foundations are made evident through the use of stylized Tudor Gothic elements, yet with equal subtlety the building reflects its congregation's Chinese heritage and Hawaii's tropic balm. Masonry screens with cross patterns derive from Chinese architectural traditions, and the prominent, narrow entrance, although centered on the body of the building, is not aligned with the front gate, in accord with feng shui concepts. The side lanai with Tudor Revival archways was originally open, with sliding doors accessing the nave.

Inside is the finest ecclesiastic Tiffany window in Hawaii. This window of 1904 includes drapery glass used for the robes and shattered glass for the foliage, both innovations of Tiffany. The window was the gift of the William Procter family of Cincinnati, of Procter and Gamble fame, in memory of Charlotte Elizabeth Procter. Ardent supporters of the mission, the Procters funded the construction of the original Shingle Style church on this property. St. Elizabeth's was formed as a mission of St. Andrew's Cathedral (OA44) tending to the spiritual needs of Chinese immigrants in the Kalihi-Palama district. With the demise of the original church in 1952, the window was retained and placed in the new building. The modern windows in the nave and clerestory date from 1977 and are the work of Judson Studios of Los Angeles. The front window was designed by Bernard Atkins in 1991 and fabricated by Raymond Ho.

Architectural Description

The 1.5 story residence located at 709B N. Vineyard Blvd. is sited midblock on a residential cul-de-sac. The building consists of two connected rectangular structures set perpendicular to each other. The structure located closest to the street is one story tall; the structure on the rear of the property has a sunken first floor and second story. Both structures sit on a post and pier foundation, utilize single wall construction, and have gable on hip roofs. Both structures have a girt.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

Sitting at the corner of King and Palama Streets, this three story retail-apartment complex with its third story red crab sign is a local landmark. Constructed of 8" half CMU block it has an asphalt shingle hip-gablet roof with overhanging eaves and exposed rafter tails. It sits on a concrete slab foundation and has paved, uncovered, customer parking in the courtyard formed by its L shaped footprint.

The first floor houses Tamashiro Market, which specializes in seafood products, including fresh fish. An aluminum framed double doorway is situated right-of-center on the *Makai* (ocean) side of the building and serves as the fish market's entry. The corner to the right of the entry has a lava rock veneer, and an up-turned, concrete awning wraps this corner. Dog leg, concrete steps run up the Palama Street elevation accessing the second story lanai walkway and a door into a third story apartment. The second story lanai/walkway wraps around the front, King Street elevation and services three apartment units on this floor. At the Ewa (western) end of the walkway is another set of dog leg steps which project out from the façade to form the base of the building's L shape. These steps also service a lanai/walkway which runs across the front of the third story. The lanai/walkways have metal railings and all windows are jalousie.

The building was built for the Tamashiro Market and it continues to fulfill its original function. It was erected in 1962 as a two story building, with the third story added in 1968.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

This two story, single family house is set back from King Street by an unkept front yard. It has a composition shingled hip gablet roof with overhanging eaves with exposed rafter tails. It is a double wall house with vertical tongue and groove walls and 1 x 1 double hung sash windows. A projecting front porch runs across the façade and has a corrugated metal shed roof supported by square Tuscan columns. Five centered, wood steps lead up to the front porch, and the front entry aligns with the steps. The entry has a set of double doors with a transom above. The transom and the screen doors utilize an arts and crafts motif of long thin panes framing the main pane.

A single story, concrete, deco style garage is to the left of the house in the front yard. It features a roll up front door and eight pane steel framed windows on the side. Fluted pilasters define the front corners and a ribbed band runs around the building above the window and front door opening. The frieze on the front elevation above the band is embellished with three raised diamond shaped lozenges.
